

# Carbon Reduction Plan

Supplier Name

idverde Limited

Publication Date

31/03/2026

## Commitment to achieving net zero

**idverde Limited** is committed to achieving net zero emissions by 2050.

## Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

**Baseline year: 2024**

### Additional details relating to the baseline emissions calculations:

In 2025, idverde Limited re-baselined, using 2024 as the new baseline year. The carbon footprint methodology is in alignment with the idverde Group.

### Baseline year emissions:

Emissions	Total (tCO <sub>2</sub> e)
Scope 1	14,049.63
Scope 2	294.29
<b>Total emissions</b>	<b>14,343.93</b>

## Current emissions reporting

**Reporting year: 2024**

Emissions	Total (tCO <sub>2</sub> e)
Scope 1	14,049.63
Scope 2	294.29
<b>Total emissions</b>	<b>14,343.93</b>

## Emissions reduction targets

In order to continue our progress to achieving net zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 10,546 tCO<sub>2</sub>e by 2030. This is a reduction of 26%.

## Carbon reduction projects

### Completed carbon reduction initiatives

Since establishing the 2024 baseline, we have implemented initiatives aimed at reducing our carbon footprint, including the rollout of a Fleet Management System and the initial deployment of an asset tagging process.

These measures will provide deeper insights into fleet operation and journey patterns, enabling us to optimise machinery use and improve journey efficiency.

As a result, we anticipate a reduction in fuel usage and wastage from idling and inefficient driving, along with an extended lifespan of our assets. These improvements are expected to drive a sustained decrease in fuel consumption, which will be reflected in our next reporting cycle for 2025, scheduled for publication in 2026.

For properties where we are in control of the supply of utilities, we have started to move to direct electricity contracting from a 100% REGO certified source and intend to continue to increase the number of properties so supplied.

### Future carbon reduction initiatives

During 2026, we will measure our Scope 3 GHG baseline, applying a robust and replicable methodology to ensure accurate measurement and reporting across our value chain. The intention is to subsequently set a full decarbonisation plan, aligned to the Science Based target initiative.

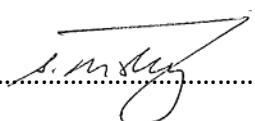

## Declaration and sign off

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required).

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

### Signed on behalf of the supplier:
